PROFILE SUMMARY

- 19 years of experience in global management and consultancy experience in the successful delivery and architecture of highly scalable, fault-tolerant and enterprise IT solutions spanning multiple industry sectors with specialization in the financial services industry.
- Represented Google Cloud at an exclusive two-day workshop and published a blog highlighting the experience. Link : https://medium.com/@jackchem2003/from-prototype-to-production-my-journey-deploying-an-adk-agent-on-google-cloud-run-8a0ac0bc1468
- Partner with the clients to develop technology transformation strategies including application migration to cloud platform, mature DevOps/SRE practices while aligning to Agile methodologies.
- Successfully, lead the Center of Excellence (COE) and transformation efforts with clients in the last 6.5 years.
- Ability to drive business opportunities, lead a solution discussion on the architecture with excellent communication and presentation skills to various stakeholders.
- Managed the development and implementation on building and innovating solutions for DevOps onboarding (an E2E solution) which increased 80% DevOps adoption.
- Leading a team of 30 and make sure the technical delivery, Hiring, Handle Ramp-up, project timelines and Management goals (Learning, Logging hours, External Certification) are met 100% without any slippage.
- Proposed, and Setup a team and helped the Verizon team on creating a governance model for accelerating DevOps transformation that resulted increase in 'TIME TO MARKET'.
- Coordinated with the team on optimizing processes rather than textbook definitions.
    - For example, Release run book/JIRA automation that enabled significant savings of 20K dollars per deployment.
- Enable automation to test/certify all the servers, VMs apart of pre-requisite checks, which enables savings of 8-man hours.
- Led a test data management team for Business 2 Business (B2B), Business2 Consumer (B2C) portfolio across Virgin Media account and increased the head count from 3 to 8-member team.
- Leader of a function responsible for setting up the test data managed service, strategy and approach for various data sources.
- Published case study on "Enhancing data security and efficiency beyond standard Test Data Management"
- Successfully planned and hosted two HACKATHON's at Organizational and Account Level.

TECHNOLOGIES & TOOLS

- Program/Scripting Language: Java, Java script & Python
- Database: Postgres SQL, Oracle DB & MySQL
- DevOps tools: Jenkins, GitHub CICD, Sonar Qube, HELM Chart, JFROG
- Cloud Engineering: GCP & AWS (Application Modernization)
- TDM Tools: Broadcom TDM, Informatica Secure Agent (IICS), Synthesized TDM
- Data Visualization: Grafana, Prometheus

EXPERIENCE

Comcast India Engineering Center (CIEC) — Chennai, India

RDK – Prerelease Ops Engineering — *Apr, 24 – Till date*

Engineering - Software Development

RDK – Developer Experience (RDK DevX)

- Leading a 15-member team both offshore and onshore locations responsible for RDK builds. Its heart of RDK platform, where we maintain and delivery (350 + pipelines) across different environments.
- Reduce 50% of the blocker failures though effective monitoring and observability, this increased the build availability from 60% to 95%.
- Implemented AI solution, will categorize and predict/automatically resolve the incidents which reduced overall resolution time 60%.

Automation Center of Excellence (ACE) - Dec'2024 to August'25

- Leading a team of 14 members across both offshore and onshore locations, setting up the ACE team for Pre-release Ops Engineering team, lead the bi-weekly and quarterly review/demos with Senior SLTs across Pre-release Ops team.
- Worked with SLTs in bringing the Agile transformation for the team along with SQUAD model to make the team is aligned with Organizational initiatives
- **Pre-release Scorecard**, developed a scorecard view across Pre-release Ops Product certification teams to know the health of the releases.
- **Test case Generator,** this is tool with AI engine that will automatically generate test case based on field defects, User stories and EPICs. Also, it will automatically push the cases to test management tools like ALM & Zephyr. This initiative will direct reduce 70% of the manual efforts.

RDK Entertainment Team – April'24 to Nov'2024

- Leading a team of 15 members across both offshore and onshore locations, providing technical leadership for the delivery of various device classes, including Element, Pioneer, and SKY TVs.
- Designed a Python engine using the Django framework, integrated with JIRA/ALM, to visualize KPIs across the QA organization on Grafana, which enhanced operational efficiency by 100%.
- Mentorship Initiative, as part of organizational wide forum on 'U-Lean Adjunct Professor' represented Grafana sessions that helped more than 30 engineers.

LTI Mindtree Pvt Ltd — Chennai, India

Media and Entrainment — *Apr 23 – Apr'24*

Senior Project Manager - Delivery

- Leading a 30-member team on OTT/Video Engineering platform team across US, Europe and India from LTIM.
- Setting up a dedicated device lab for team to be productive and eliminated the device dependency by 90%.
- Increased the revenue through setting up a portal for device tracking/inventory which eliminated the manual touch points and direct cost savings of 13.5 K USD per quarter.
- Prepared the case-study document on E2E device hub setup and published the same in client side.
- Implemented a solution that will execute the Cypress automation script on Jenkins job without VPN on different INTRL region which reduced the overall VPN license cost of 750 USD per year.
- Led and established the 'Standard Operating Procedure' which reduced the overall onboarding time by 80%

TATA Consultancy Services, — Chennai, India

Google Business Unit — *July, 21 – April, 23*

Associate Consultant - Cloud & TDM Engineer

Cloud Engineer

- Expertise in Devops tools chain (GitHub CICD, docker, Kubernetes, helm chart) enabled automation that reduced the deployment time from 2 days to 2 hours.
- Good Experience in deploying the spring boot and Java based applications in GCP (GCE/GKE & Cloud Run) environment.

- Implemented the integration between GRAFANA and BIGQUERY through GKE which enabled one of the mandatory compliance policies to visualize the Security log.
- Building and configuring Kubernetes-based infrastructure, Cloud-auth-proxy (cloudsql-postgres/MSSQL), Kube Proxy, Ingress, etc.
- Established a document repository in Confluence that reduced the onboarding time from 30 days to 4 days.
- Deployed IICS Agent, Synthesized in GKE cluster and created CICD pipeline for configuring IICS Agent (Published White paper)
- Understanding of GCP Landing Zone, Well-Architected Framework and used terraform to provision the resources in GCP.

TDM Engineer

- Established an onboarding procedure for other teams to install and setup TDM tools in the Google cloud.
- Lead the pilot test for IICS and Synthesized tools. Also, worked closely with Vendor team to implement critical features/ issues that were identified in Pilot phase.
- Represented the team in architecture board and explained the business use case/Cloud Adoption for TDM solution.

Cognizant Technology Services, Chennai, India

Communication and Media/Entrainment *Apr, 19 – Jul 21*

Manager – DevOps Transformation/ Dashboard Development

DevOps Transformation

- Design on migrating Jenkins to GitLab CICD deployment which results in 70% of Operational Cost.
- Taken initiative on increasing the pipeline adoption for inactive pipelines which increased by 80%.
- Created proactive governance model and quality gates that cater different SDLC stages (Code Coverage analysis, Security scan, Unit test, Deploy, Sanity Test and Performance Test) across development/QA teams.
- Created an instrumental idea on implementing shared Library that will bridge Jenkins/CICD application and eliminate manual efforts by 80% onboarding to DevOps.
- One touch automation on performance testing scripts and automatically visualization the results on GUI screen which further increase 100% adoption rate on performance testing.

Dashboard Development

- Design and developed a dashboard that will visualize the CICD adoption which will measure the client KPI.
- Leading 20-member team and make sure the deliverables are meet with respect to every SPRINT.

Prodapt Solutions Chennai (India), Hook (UK), Schiphol (Netherlands)

Liberty Global Business Unit *Jun, 16 – Aug19*

Senior Technical Lead, (DevOps Transformation, TDM Architect & QA Manager)

DevOps Transformation

- Identify manual touch points on build pipeline and automated pre-checks, post deployment checks for three application components.
- Administer/led JIRA setup, installation and integration with other CD tools along with implementing triggers that reduce manual efforts by 50%
- Technically support scaling, Greenfield, upgrade and patch deployments for five application components.
- Created & deployed Word Press Docker image (SDIL Knowledge Point) that enabled single collaboration for all team activities across different locations.
- Leading a team of 20 across Europe and India.

TDM Architect

- Gatekeeper to testing organization of data masking and generating synthetic data generation for 70+ applications.
- Leader of a function responsible for setting up the test data managed service, strategy and approach for various data sources.
- Defined test data management strategy/model for supporting Greenfield Project, Repetitive Project and One-time Project. This reduced on-boarding time by50%.

- Responsible for on-boarding resource, resource forecast and drive return of investment (ROI) for test organization.
- Successful delivery of optimized framework for data masking 50+ millions records on Netezza DWH that led 30% savings in overall dev. and testing cycles.
- Represented CA (Computer Associates) forum to elaborate successful implementation and delivery of Salesforce Cloud and Netezza DWH.
- Defined and implemented a Virgin Media continuous improvement test data transformation, based on best practice process/governance model.
- Delivered identical solution in generating synthetic data for Salesforce Cloud platform

QA Manager

- System Test Manager for B2B DE Catalyst program that hold 9 million customer bases.
- Responsible for leading and setting up system integration testing team in Netherland and India from 5 to 30+.
- Adopted S-Curve estimation technique to reduce the overall testing cost by 20%.
- Proactively, worked with AMDOCS billing testing team to complete the SIT Cycle/Start UAT on time.
- Developed robust selenium automation framework to help regression and progression test suite by 70%.
- Lead Training program with UAT team to eliminate 80% invalid defects raised.

Verizon Data Services India Pvt Ltd — Chennai, India

Network & Technology Portfolio — *Jan,07 – June16*

Technical Lead (Automation COE Lead, QA Lead)

Automation COE Lead

- Leader in setting up testing center of excellence within testing portfolio of 1000+ test engineers.
- Leading different proof of concepts with selenium, RIDE (Robot framework) using Python and TESTNG (TDD framework) using JAVA.
- Responsible to evaluate different automation, test management tools and frameworks across 30+ test teams.
- Led organization wide Selenium workshop to enable 80% transformation in automation.
- Lead and Mentor fresh graduates with basic etiquette like email, interacting with co colleagues, punctuality & discipline, prioritizing & accomplishing the given task on time and teamwork.
- Performance Engineering CI/CD implementation through integrating JMETER, BADBOY and Jenkins/Travis that increase the testing cycle by 20%.
- Active participation in different technology forum (In50 hours Community) to bring innovation.

QA Lead

- Lead for System Integration (SIT) of application holding 18 million consumer mass business (CMB) customers.
- Responsible for Business Requirement Sign-off from testing & UAT team.
- Manage 18+ interface testing team across CMB testing portfolio and responsible end-to end integration testing.
- Responsible for Production deployment testing and UAT testing sign-off.
- Review test plans, test cases and test evidence from suppliers like Tech-Mahindra & Cognizant.

EDUCATION

2007 -2008: MCA from Tamil Nadu Open University – 70%
2003-2005: BCA from Madurai Kamaraj University (Integrated) – 69%
2001-2004: Diploma in Information Technology from NTTF – 78%

AWARDS AND ACCOLADES

- Kubernetes and Cloud Native Associate (KCNA) – Enrolled/In-Progress.
- Certified GCP - Associate Cloud Engineer (Certificate ID: 2fk0eQ, Expire Dt: Feb'2024)

- Certified AWS Solution Architect Professional (Validation ID: C7TGC7RCHMF4QX9B, Expire Dt: Jan'2023)
- Certified AWS Solution Architect – Associate (Validation ID: RPRJFLBCHFBQQ5S5, Expire Dt: Jan'2023)
- Proven Professional, CA Test Data Manager 3.x Implementation
- Core Value Excellence Award from CEO of Prodapt, for TDM Implementation (Feb'2018)
- Winner 'Performance Testing' during Hackathon Code Challenge from Sr Delivery head (Nov'2015)
- Spot Award for exemplary contribution in driving E2E test and UAT training from Senior VP (Nov'2011)
